

## Type 30 // Product Sheet

The HEDD Type 30 is an exceptional midfield monitor. Whether as a full-range speaker solution in an elegant recording studio, post-production space or in broadcasting contexts, it is an ideal player in the most diverse fields of application. This powerful 3-way-system, that features two horizontally aligned and rock-solid sounding 7"-woofers, a 4"-midrange woofer, and the HEDD Air Motion Transformer tweeter for vivid and uncolored high frequency reproduction, creates an ultra-wide frequency range from 30Hz all the way up to 50kHz. Nothing less than 4x300 watts of the finest ICEpower® amplification are hidden in the Type 30's strong and beautiful, matt-black cabinet.

The Type 30 offers XLR and RCA connections and full HEDD Bridge compatibility, meaning that you can insert an optional input-card for AES3-, USB2-, and even Dante / AES67-functionality into a free slot on the back-panel of the speaker.
